Title: Micronutrient Fortification of Food and its Impact on Woman and Child Health: A Systematic Review

Version: 5 Date: 1 July 2013

Reviewer: Alexander Tsertsvadze

Reviewer's report:

Results section (page 18) – Vitamin D and Calcium
The authors state that differences were significant, but SMD and 95% CIs do not correspond to this statement
“Pooled analysis of results from three studies showed bone resorption markers (CTx and P1NP)
reduced significantly (SMD: -4.93 [95% CI: 7.78, 2.08] and SMD: -13.18 [95% CI: -15.73, 10.63] respectively) in both the WRA and post-menopausal women group.”
