Reviewer's report

Title: Psychological treatments for common mental health problems experienced by informal carers of adults with chronic physical health conditions (Protocol)

Version: 2 Date: 3 January 2013

Reviewer: Kerry Dwan

Reviewer's report:

In sensitivity analyses, I'm not clear what they mean by high attrition (n<30). Surely it should be based on a percentage of the sample size? Also, how do you propose a sensitivity analysis on selective reporting?
