Reviewer's report

Title: Bilateral brachial plexus injury following acute carbon monoxide poisoning

Version: 3 Date: 25 April 2013

Reviewer: Fadi Xu

Reviewer's report:

The paper has been significantly improved. I still don't understand the following sentence. "In this study, of 2759 patients admitted to hospital for CO poisoning and examined clinically between 1976 and 1982, neuropathy was diagnosed in 23 subjects. The incidence of neuropathy was 3.64% in all admitted cases." Does it mean that 23 patients suffered from neuropathy in 2759 patients admitted to hospital for CO poisoning and examined clinically between 1976 and 1982? If so, the morbidity of neuropathy should be 0.8%. After the minor revision, I think that this paper is acceptable.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
