Reviewer's report

Title: Tobramycin exposure from active calcium sulfate bone graft substitute

Version: 2 Date: 23 November 2013

Reviewer: Keping Chen

Reviewer's report:

Discretionary revisions:
I think it is not enough to get a conclusion using only 12 patient samples. Moreover, the age and gender of patients as factors to count on is inadequate in your experiment. If possible, I suggest the authors should consider the differences of ethnical, history of diseases, etc

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
