Reviewer's report

**Title:** Melatonin analgesia is associated with improvement of the descending endogenous pain-modulating system in fibromyalgia: A phase II, randomized, double-dummy, controlled trial

**Version:** 2  
**Date:** 14 April 2014

**Reviewer:** Daniel Cardinali

**Reviewer's report:**

- **Major Compulsory Revisions**
  None

- **Minor Essential Revisions**
  Careful review of reference list is needed. For example, ref. 67 is wrongly quoted in the text. In addition, original ref rather than reviews must be cited. For example the first evidence that GABA/BZP receptors were involved in melatonin analgesic action is that of Golombek et al. (Eur J Pharmacol 194:25, 1991).

- **Discretionary Revisions**
  None

**Level of interest:** An article of outstanding merit and interest in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
