Reviewer's report

Title: An association of adult personality with prenatal and early postnatal growth: the EPQ lie-scale.

Version: 1 Date: 14 October 2013

Reviewer: Louis A Schmidt

Reviewer's report:

The authors examined the relation between issues of pre and post natal growth and personality. This manuscript is an extension of previous work and has important theoretical implications.

The authors should consider the following two points:

1) This recent paper is also consistent with their findings and they may want to reference it.

2) the authors should also acknowledge in the limitations section that early parenting may be a contributing factor.

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
