Reviewer's report

**Title:** An Intra-tendonous ganglion cyst causing impingement between the anterior cruciate ligament and anterior root of the medial meniscus: a case report.

**Version:** 7 **Date:** 15 August 2013

**Reviewer:** Anastasios Georgoulis

**Reviewer's report:**

the conclusion section has to be change. the most important findings are that a ganglion cyst on the ACL can be caused by injury of the anterior horn of the meniscus and surgery limited on the meniscus can solve the problem. if this report is the first or not is of secondary importance.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
