Reviewer's report

Title: Required propofol dose for anesthesia and time to emerge are affected by the use of antiepileptics

Version: 2 Date: 18 November 2014

Reviewer: Bruno Laviolle

Reviewer's report:

The authors have improved their manuscript in the revised version. The subgroup analysis performed in the new version comparing the use and non use of antiepileptics in each category of neurological disorder gives additional informations and should be moved at the end of the result section.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
