Reviewer's report

Title: Nefopam for the prevention of perioperative shivering: A Meta-analysis of randomized controlled trials

Version: 2 Date: 10 April 2015

Reviewer: cigdem Akyol akyol beyoglu

Reviewer's report:

Major Compulsory Revisions:
1. number of enrolled patients to the study is different in page 6 line 4 and line 24 and table 2. the exact number of patients should be clarified meticulously.

Minor Essential Revisions:
1. #n figure 1 in the right, second top box, it is written 53 articles excluded inconsistency of abstract and title, but this number is written as 52 in page 5 line 31
2. the second aim is to search about the adverse effects of nefopam but only extubation time is emphasised and there isn't any explanation about what these side effects are in methodology
3. #t would be better if reviewers should be blinded to trial authors, this should be mentioned in last paragraph of the discussion

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
