Reviewer's report

Title: Polymorphisms on PAI-1 and ACE genes in association with fibrinolytic bleeding after on-pump cardiac surgery

Version: 3 Date: 12 March 2015

Reviewer: Jarle Vaage

Reviewer's report:

This is a a manuscript that already has been reviewed and the reviewers have asked a series of detailed questions that critically questioned several parts of the manuscript. According to this reviewer the Authors have answered all questions very thoroughly and they have outlined the limitations of the study.

The role of genetics in evaluating surgical risks and complications is a new and evolving field. The investigators are complemented for working in this Field.

All changes in the manuscript are shown which makes the manuscript quite difficult to read and to assess. However, this reviewer can see nothing to add to the revised manuscript.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
