Reviewer’s report

Title: Assessment of cerebral circulation in a porcine model of intravenously given E. coli induced fulminant sepsis

Version: 1 Date: 08 Feb 2017

Reviewer: Amit Sharma

Reviewer's report:

The revised manuscript "Assessment of cerebral circulation in a porcine model of intravenously given E. coli induced fulminant sepsis" has been greatly improved by the authors. Although manuscript has been presented with very small sample size and results have weak clinical significance, still, this scientific work is an interesting piece of information, which can help to calibrate further experimental conditions to understand the complication related to sepsis. Therefore, I recommend this manuscript for publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
