Title: Assessment of cerebral circulation in a porcine model of intravenously given E. coli induced fulminant sepsis

Version: 3 Date: 23 May 2017

Reviewer: Tobias Hilbert

Reviewer's report:

The authors have put a lot of work into presenting a comprehensive revision of the manuscript. With new control animals being included into the analysis, the differences in baseline data that were potentially explained by a seasonal difference in the inclusion time point now have been cleared up. I believe the report has improved substantially, and I hope the authors feel the same way. It is my opinion that the manuscript should be published in its present state.

Are the methods appropriate and well described?
