Title: The Effects Of Desflurane And Sevoflurane On Nesfatin1 Levels In Laparoscopic Cholecystectomy

Version: 3 Date: 18 Dec 2017

Reviewer: Martin Schlaepfer

Reviewer’s report:

The article has clearly improved thanks to the current revision.

I'd consider to revise the first sentence of the discussion section (and according changes in the abstract): Instead of writing "The major findings of this study indicate that two different volatile anesthetics, desflurane and sevoflurane, do not differ with respect to their effects on nesfatin levels. In both groups, there was no significant difference between the preoperative and postoperative nesfatin-1 measurements."

I would suggest: " The major finding of this study is, that nesfatin-1 levels are unaffected by laparoscopic cholecystectomy and remain unchanged by sevoflurane and desflurane".
