Reviewer’s report
Title: Grade III Bone Cement Implantation Syndrome in Malignant Lung Cancer patient: a Case Report

Version: 0 Date: 18 Dec 2017

Reviewer: Michael Firstenberg

Reviewer's report:
Overall, I think this is an important topic on a problem that maybe few are aware of. It is interesting and well written. My only major comments are:

1) the authors describe 3 grades of BCIS - but they do not describe them specifically - maybe consideration should be given to a table outlining each stage, estimated mortality
2) likewise, the authors mention some risk factors - again, this might be worth a small table to convey this information.
3) maybe in these tables could be included at an expansion of the discussion and consider including some information regarding treatment - especially in the OR and if the patient survives, management in the ICU
	hank you for the opportunity to review this manuscript

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes
Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
