Reviewer’s report

Title: The attenuation of neurological injury from the use of simvastatin after spinal cord ischemia-reperfusion injury in rats

Version: 0 Date: 13 Sep 2017

Reviewer: Wei Yin

Reviewer's report:

The authors only used a single HE stain to count the normal neurons in Fig 1. It was not enough to convince the neuroprotection effects of the drug. At least more experiments like Nissl or TUNEL stain should be supplement in MS.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
