Reviewer’s report

Title: Comparison of surgical field visibility during propofol or desflurane anesthesia for middle ear microsurgery

Version: 2 Date: 12 Apr 2019

Reviewer: Smita Prakash

Reviewer's report:

The authors have made suitable modifications to the manuscript.

I suggest the following or something akin to it for the Conclusion:

In summary, although there is a statistically significant difference between propofol-remifentanil and desflurane-remifentanil groups with regard to surgical field visibility according to Boezaart scale, when remifentanil is used in combination with desflurane, similar operative conditions are achieved. The requirement for remifentanil is greater in the desflurane-remifentanil group.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
