Reviewer’s report

Title: Effect of low dose naloxone on the immune system function of a patient undergoing videoassisted thoracoscopic resection of lung cancer with sufentanil controlled analgesia — a randomized controlled trial.

Version: 1 Date: 30 Oct 2019

Reviewer: Jose Navas

Reviewer's report:

The manuscript looks really good, easy to read and to understand.

There is just one clarification I believe need to be adjusted/addressed for the readers.

Again, I find really hard to believe that ALL your patients were ASA 2. I suggest either remove the ASA status from the paper (since it will not change the overall picture) or revise the ASA classification of these patients when they went to the OR.

Lung lesions going to the OR suspected of cancer, especially if the patient is having symptoms is usually a ASA 3 (severe systemic disease), this is why they are having the surgery.

Kindly revise this. Other than that the manuscript looks great.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes
Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
