Reviewer's report

Title: Detrimental Effects of Filling Laryngotracheal Airways to Excessive Pressure (DEFLATEP): A Quality Improvement Initiative

Version: 0 Date: 03 Dec 2019

Reviewer: Jacek Smereka

Reviewer's report:

A well-written paper raising an important clinical issue. Unfortunately, the lack of pressure control in the sealing cuff when using SGA is a common error. While cuff pressure monitoring of the endotracheal tube is standard, sealing in SGA devices is not often checked, although it is even recommended by manufacturers. The paper submitted for review is based on a properly selected study group, obtained the consent of the bioethics committee, the introduction and discussion are written in a very good way and supported by contemporary literature. I have no objections to the choice of statistical methods and the presentation of the results.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
