The description of the depth the needle was inserted is not useful. The terminology should indicate the depth from skin to target in the perpendicular direction to the skin as well as the length of the shaft that was inside the body. In a sense, a right triangle is defined by the depth from the skin to the target in the perpendicular direction to the skin and the hypotenuse is defined along the path of the needle.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
