Reviewer's report

Title: A case report of inflammatory pseudotumor of carotid artery with radiologic-pathological-surgical findings

Version: 2 Date: 17 January 2015

Reviewer: Amr Gad

Reviewer's report:

-The quality of English language needs some corrections
- the symptom is hoarseness of voice not ( hoarseness )
- explain why there was conjunctival hyperemia
- why fibro- muscular dysphasia is a D.D
- you did not try to find the exact anatomical structure in which the inflammation occurred e.g. adventesia, carotid body or peri-vascular lymphatics ., because you could excise the mass without any arterial reconstruction

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
