Reviewer’s report

Title: A case report of inflammatory pseudotumor of carotid artery with radiologic-pathological-surgical findings

Version: 2 Date: 30 January 2015

Reviewer: Giovanni Melina

Reviewer’s report:

Major Compulsory Revisions
The Authors describe a case of an IPT of the carotid artery.
Abstract is too long. The reader should clearly understand what this investigation is about if this must be described with few sentences.
They state that a systematically review of the literature on this particular pathology has been performed, but apart from some references included in the text there is not such analysis.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
