Reviewer's report

Title: Case Report: Severe Reversible Cardiomyopathy Associated with Systemic Inflammatory Response Syndrome in the Setting of Diabetic Hyperosmolar Hyperglycemic Non-ketotic Syndrome

Version: 0 Date: 14 Jul 2015

Reviewer: Ricardo Perez de la Hoz

Reviewer's report:

This is a case report, which can not be evaluated beyond what it is. This is really a very interesting case where the possibility of associated mechanisms for the production of an acute non-coronary cardiomyopathy produced by action of a severe inflammatory response arises. In this particular case in the story of the case, I think it would be useful to know the laboratory values to the 4th day of evolution for comparison with those measured at the beginning of the description, and be sure that the inflammatory state has declined. It could also be interesting if permitted by extension see an EKG the 4th day. Suggested mechanisms in the discussion are correct.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
