Reviewer's report

Title: Successful percutaneous coronary intervention for an in-stent chronic total occlusion in a patient with dextrocardia: a case report

Version: 0 Date: 27 Sep 2017

Reviewer: Carlo Tumscitz

Reviewer's report:

This case is adequately written and described but there are some major issues regarding the CTO technique used to recanalize this vessel. In contemporary CTO procedure it is advisable to use double arterial access, especially if there is collateral flow just from the left coronary, moreover at least a 7fr guiding catheter would have been preferable even for antegrade techniques. This is even more important because of the high JCTO score (even if it could be downgraded to JCTO 2 because of the lack of visual calcifications in the CTO).

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
