Reviewer’s report

Title: Medium-term outcomes of 78,808 patients after heart valve surgery in a middle-income country: a nationwide population-based study.

Version: 0 Date: 16 Jul 2017

Reviewer: Efstratios Charitos

Reviewer's report:

This is an interesting report in a large cohort of patients that underlines the differences in patient populations that developing countries face in contrast to developed countries. I do not agree that this manuscript provides long term results of these procedures. At most the authors describe midterm results. The language of the manuscript should be revised and improved. The comparisons between the groups should be toned down as these are different pathologies and the patients are not matched. At most the authors should elaborate on a descriptive nature of their patient population that inferring whether MVr is superior to MVR for example.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:

Needs some language corrections before being published
