Reviewer’s report

Title: Association of rs662799 in APOA5 with CAD in Chinese Han population

Version: 0 Date: 23 Apr 2017

Reviewer: Christoph Sinning

Reviewer's report:

The performed study by Chen et al. highlights the importance of certain genetic traits in the development and progression of atherosclerosis. An important issue in the conducted study is that the described SNPs is quite common in Asian populations, hinting at the importance of individual medical treatment to properly manage CAD in the shown sample of the population.

Therefore the results are relevant.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
