Reviewer’s report

Title: A population-based screening study for cardiovascular diseases and diabetes in Danish postmenopausal women: Acceptability and prevalence

Version: 0 Date: 09 Sep 2017

Reviewer: Angela Maas

Reviewer's report:

Interesting study, with appropriate conclusions which indicates that we need more precision for the most cost-effective primary preventive screening programs.

1. what was the reason for lower participation in the eldest group of women? Did you undertake any efforts to ask them again to participate? Also because they will have the highest risk.

2. to identify women at higher risk it could have been useful to include family history and hypertensive pregnancy disorders as important risk factors. These are also in the guidelines. Why did not you use them to discriminate among women??

3. do not you consider these primary prevention checks as core tasks for GPs? Explain your considerations.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
