Reviewer’s report

Title: A case of hypertrophic cardiomyopathy combined with muscular ventricular septal defect and abnormal origin of right coronary artery

Version: 2 Date: 04 Dec 2018

Reviewer: Michiyo Yamano

Reviewer's report:

Authors described that the difficulty of distinguishing incomplete spontaneous closure of muscular VSD from myocardial crypt. Then, they also mentioned the possible background and process of the coexistence of hypertrophic cardiomyopathy and incomplete spontaneous closure of muscular VSD. It is an interesting consideration.

In the last paragraph of discussion and conclusion, authors wrote 'anomalous RCA arising from left coronary.' Is it a miswriting 'anomalous RCA from left sinus of Valsalva'?

It would be great if the authors paid more attention to the use of abbreviations.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
