Reviewer's report

Title: Association between Coronary Dominance and Acute Inferior Myocardial Infarction: a Matched, Case-control Study

Version: 0 Date: 13 Sep 2018

Reviewer: Jacek Bil

Reviewer's report:

Authors investigated whether coronary dominance was associated with the incidence of acute inferior myocardial infarction (MI).

1. Do authors have any data showing not only the impact of right dominance on the inferior MI incidence, but also the survival and prognosis after inferior MI?

2. Why authors matched patients in 1:2 ratio, not 1:1?

3. Was there any difference between STEMI and NSTEMI?

4. Could authors be a bit more precise in inclusion and exclusion criteria?

5. What were the chronic and systemic diseases?

6. What kind of arrhythmias were the exclusion criterium?
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
