Reviewer’s report

Title: Extreme ST-segment elevations in seemingly no significant angiographic coronary artery abnormalities: a case report

Version: 2 Date: 17 Jan 2019

Reviewer: Weichieh Lee

Reviewer's report:

It is a good work about myocardial infarction without obstructive coronary atherosclerosis. Via this case, the readers can know myocardial infarction without obstructive coronary atherosclerosis is associated with increased risk of ventricular arrhythmias.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
