Title: Nepal Pioneer Worksite Intervention Study to Lower Cardio-metabolic Risk Factors: Design and Protocol

Version: 0 Date: 20 Nov 2018

Reviewer: Daniel Ter Goon

Reviewer's report:

I commend the authors for an excellent, scientifically robust and clear research protocol. The study will add to the understanding of environmental and behavioural attributes of employers in a workplace. If the study demonstrates a significant effect, a scaled up approach could produce an important reduction in CVD burden through environmental and individual level prevention programs. The lessons learned may also be replicated in similar worksites in Nepal and translated to similar settings globally.
