Reviewer’s report

Title: Unsatisfactory risk factor control and high rate of new cardiovascular events in patients with myocardial infarction and prior coronary artery disease

Version: 1 Date: 29 Jan 2019

Reviewer: Guy De Backer

Reviewer's report:

Thank You for answering my comments. Unfortunately the newly submitted manuscript it is not possible to identify immediately the changes that were made.

Some of Your answers could also have been introduced in the discussion for instance the limitations of the NORMI register having no info on the causes of death, having no info on the management after the primary hospitalization; it would also be of interest to know somewhat more on why so many patients with established CHD are not on a statin in a country like Norway and in a period when the efficacy and safety of statins for secondary prevention were well demonstrated.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
