Reviewer’s report

Title: Transvenous dual-chamber pacemaker implantation in patients with persistent left superior vena cava

Version: 0 Date: 09 Mar 2019

Reviewer: Francesco Vitali

Reviewer’s report:

This is not a real retrospective-observational study on 171 patients as the authors said. This is more a case series of 9 patients undergoing permanent pacemaker implantation (PPI) through PLSVC. On 9 patients you can't conclude that PPI through PLSVC is technically feasible, safe, and effective.

Despite this is a well-written article and on an interesting issue. The implant procedures are well described.

Reconsider article type and methods.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
