Reviewer’s report

Title: A model to predict unstable carotid plaques in population with high risk of stroke

Version: 2 Date: 19 Feb 2020

Reviewer: Erkan Cüre

Reviewer's report:

1. The conclusion section of the article is too long. The authors should summarize the conclusion.
2. The authors should mention that decreased HDL and increased LDL relate to an unstable plaque etiopathogenesis with 1-2 sentences in discussion section. 3. The authors should give the cut-off value for HDL in the table 2.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
