Reviewer's report

Title: The Effectiveness of Prehospital Hypertonic Saline for Hypotensive Trauma Patients: A Systematic Review and Meta-Analysis

Version: 0  Date: 24 Jul 2017

Reviewer: Eli Segal

Reviewer's report:

Since studies included in the meta-analysis included only traumatized patients, title of study should reflect that, despite the authors not initially limiting their search to only trauma patients. To provide more information about the validity of the source studies, please provide information about loss to follow-up in each study. Was the result of the Cochran's Q test for heterogeneity reported? Can the authors substantiate their use of a fixed-effects model in terms of the observed heterogeneity of the included studies? Table 2: Cooper study, exclusion criteria, # 6 - typographical error: Had peripheral edema

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review

Quality of written English
