Reviewer’s report

Title: Accuracy of acute burns diagnosis made using smartphones and tablets: a questionnaire-based study among medical experts

Version: 1 Date: 13 Nov 2017

Reviewer: Nico Hoogerwerf

Reviewer's report:

Since this is the revised version, larger problems in the manuscript were taken out already. I have to give a compliment to the authors with this basic work, which is a tool in tele-medicine and of value in remote area's! The authors compared pictures taken from burns in adults and children, where burned surface area (BSA) and burn depth have to be calculated or given. Good correlation between the three group professionals was found, with rather good correlation of the estimated values. Only the burn depth seem to be a problem, to determine with pictures... The selection of cases has been well described and helps to get an idea how this has been done and the authors did a good job with the comments on this part after the first version.

A nice study with a good described methods and results!

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
