Reviewer’s report

Title: How Spontaneous Pneumothorax is managed in Emergency Departments: A French multicentre descriptive study.

Version: 0 Date: 24 Sep 2018

Reviewer: Oka Shojiro

Reviewer's report:

This paper is very interesting to me.

I thought the result should be shared in the world.

The information I want to add is about the size of pneumothorax.

Patients who are clinically stable and have their first PSP can be supplemental oxygen and observed if their pneumothorax is small (≤ 2 to 3 cm between the lung and chest wall on a chest radiograph).

Patients who are clinically stable and having their first PSP should undergo needle aspiration if their pneumothorax is large (> 3 cm rim of air on chest radiograph).

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
