Reviewer’s report

Title: The effectiveness of ultrasound in the detection of fractures in adults with suspected upper or lower limb injury: A Systematic Review and Subgroup Meta-Analysis

Version: 1 Date: 13 Nov 2018

Reviewer: rosanna varutti

Reviewer's report:

it is redundant in several points in describing the selection articles from the literature.

ultrasound sensitivity is higher on detecting upper and lower limb fractures, but, what's the limit of fat mass in detecting fractures?

which fracture type are detected? parcelar dislodgement, completely bone fracture, cortical lesion?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
