Reviewer’s report

Title: Body temperature measurement in ambulance: a challenge of 21-st century?

Version: 0 Date: 05 Jan 2019

Reviewer: Hagos Atalay

Reviewer's report:

Thank you for giving opportunity to review your article.

My first concern is What is the significance of this study? If you know surface temperature but not core temperature, what will be the basic significance difference in clinical management?

What is the implication of measuring core temperature?

Your study design, study participants were not clear? You said survey method so, what survey you are used?

How do you come up your final simple size?

How do you select the ambulances?

How do you analyzed your data?

You find 3.28% of ground ambulances used core temperature could you justify it why happening this? I assume that measuring surface temperature was enough.

What was your conclusion?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review.

Quality of written English
