Reviewer’s report

Title: Predictors of mortality and validation of burn mortality prognostic scores in a Malaysian burns intensive care unit

Version: 1 Date: 22 Sep 2019

Reviewer: hasan aldinc

Reviewer's report:

Dear Author,

1. According to the inclusion criteria, patients with blunt trauma (especially traffic accidents) may have much more mortal health conditions (intracranial bleeding, blood loss, chest trauma etc.). This is a limitation of this study and should be written. Yes the results are about burned patient mortality, but not burn mortality.

2. In the results, L14-18, you defined the time from injury to arrival of BICU results. This is unnecessary because it can be easily expected.

Kind regards

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
