Reviewer’s report

Title: Harnessing inter-disciplinary collaboration to improve emergency care in low- and middle-income countries (LMICs): Results of research prioritisation setting exercise.

Version: 0 Date: 17 Aug 2020

Reviewer's report:

First of all thank you very much for the opportunity to review this paper. The topic and the question is more than interesting and is a very important work in the field of Emergency Medicine. The collaboration and the topics in the paper show an excellent way to improve EM in LMICs. In my opinion the priorisation in the result section is wisely chosen.

The paper is well structured, and also well written.

In the future I am sure there will be a lot of research data to publish. My only concern is that right now, the question and the results seem to be more like a progress report than a research output paper. So I think it is politically important, however as an original research paper not yet suitable.

Publons Reviewer Recognition. Springer Nature can send verification of this review directly to Publons (a subsidiary of Clarivate Analytics). If you would like to take advantage of this service, please click on the “Yes” option below. Your name, email address, title of the reviewed manuscript, name of the journal, and date of your review submission (the “Review Data”) will then be transmitted to Publons upon publication of the manuscript. If you have already registered at Publons, they will notify you of the receipt of this review and update your profile as per your settings and their policy. If you are not registered with Publons, you will receive an email from them asking you to register in order for them to be able to recognize your review on your new profile page. Publons may use the Review Data to generate derivative metadata for the benefit of Publons and you as a reviewer, carefully considering the sensitivity of such information. For example, Publons may verify your record as a reviewer by updating your profile published on its webservice if you have registered for such service or help editors to identify candidate reviewers. Please find the details of processing in Publons’ privacy policy https://publons.com/about/terms.

Is the study design appropriate to answer the research question (including the use of appropriate controls), and are the conclusions supported by the evidence presented?

No

Are the methods sufficiently described to allow the study to be repeated?

Yes

Is the use of statistics and treatment of uncertainties appropriate?

No

Is the presentation of the work clear?

Yes

Are the images in this manuscript (including electrophoretic gels and blots) free from apparent manipulation?
Yes
