In this paper authors analyze the effects of pre-notification, invitation length, questionnaire length and reminder on participation rate: a quasi-randomize controlled trial with chi-square test.

From the methodological point of view I cannot see something new enough to be suitable for this particular journal. Results are more or less replicative to similar studies.

**Are the methods appropriate and well described?**
If not, please specify what is required in your comments to the authors.

Yes

**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.
