Title: The Chinese version of Attitudes towards guidelines scale: Validity and reliability assessment

Version: 1 Date: 02 Nov 2018

Reviewer: Jeroen Dikken

Reviewer’s report:

Although I find the manuscript is acceptable for publication, I recommend some additional explanation regarding the content of the four factors. From a statistical point of view they are clear, but what do they mean? So, what is the content of the factors? If not an uni-dimensional scale, explaining the factors separately (and how to interpreted them separate) would be useful for clinical practice. Hopefully you could elaborate a bit more on them in the article.

Good luck.
