Reviewer’s report

Title: A qualitative exploration of the use of calendar landmarking instruments in cancer symptom research

Version: 2 Date: 2 September 2014

Reviewer: Peter Vedsted

Reviewer's report:

The authors have now done a fine work in incorporating relevant suggestions and comments from the reviewers. That has changed the paper dramatically from the first version I saw. The statements in the narrative of using CLI are now much more in line with what the data collected can support.

I have no further comments.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
