Reviewer's report

Title: Estimating the workload associated with symptoms-based ovarian cancer screening in primary care: an audit of electronic medical records

Version: 2  Date: 17 September 2014

Reviewer: Rosemary Tate

Reviewer's report:

A well-written and interesting paper which represents a lot of work by the authors.

I have just a couple of minor essential revisions

a) Could the authors provide more detail on exactly what was done during the data cleaning process?

b) It would be good if there was a reference to the large UK trial on ovarian cancer screening programme that is due to end in 2015. In particular maybe they could reference (and discuss) the interim results that were published a year or two ago. This would give the work a bit more context

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
