Reviewer's report

Title: Patient and Practitioner views on the most important outcomes arising from primary care consultations: a qualitative study

Version: 2 Date: 13 July 2015

Reviewer: Maeve O'Beirne

Reviewer's report:

No Major compulsory edits

Minor Essential Revisions-a few grammatical errors (singular instead of plural etc) Authors need to have someone edit the paper for this.

In the limitations section, I believe that there should be some mention of the ethnic makeup of their sample. The have used a predominantly white sample, this will limit the studies findings for countries that are not so predominantly white and limits their own ability to measure PROMS in their immigrant populations.

No discretionary edits

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
