Reviewer’s report
Title: Analytical typology of multiprofessional primary care models

Version: 0 Date: 03 Dec 2017

Reviewer: JAMES AMISI

Reviewer's report:
This is an interesting article that in my view is well done and has met the necessary research controls attaining the aims of the study i.e. "Producing conceptual tools to support the transformation of primary care models". This is qualitative research and while agree there is an element of subjectivity in the analysis processes, the authors have done an excellent job in explaining the methods used with appropriate citing of the relevant literature. However on page 2, line 25 on the key words I think it will be appropriate to write the word health services research in full.

It would be interesting to see these generated conceptual tools applied in future by other scholars to support the transformation of primary care models.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?

If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
