Title: A multidisciplinary self-management intervention in patients with multimorbidity and the impact of socioeconomic factors on the results

Version: 1 Date: 18 Apr 2018

Reviewer: Ingmar Schäfer

Reviewer's report:

This is an interesting, well-written paper. However, I have three questions that should be discussed. First, have any of the results presented here been part of a paper published before? If so, it should be mentioned. Second, there is little discussion about the question which implications these results have for further research and clinical practice. This should be amended. Third, do the author have any idea, why these dimensions and not any other dimension have improved and why some and not all dimensions related to SES? This also needs to be discussed.

Are the methods appropriate and well described?
