Reviewer’s report

Title: Adherence to treatment and related factors among patients with chronic conditions in primary care: A cross-sectional study

Version: 1 Date: 03 Aug 2019

Reviewer: Michal Shani

Reviewer's report:

Treatment adherence is an important issue in chronic care and this study adds information about factors associated with medication adherence.

The authors addressed most of the issues. The results indicated that the number of pharmacies used for refilling prescriptions treatment adherence decreased. It seems more accurate to address the role of pharmacist in the primary care team than the pharmacy itself or the computerized system that should be used.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
