Reviewer’s report

Title: An educational study to investigate the efficacy of three training methods for infiltration techniques on self-efficacy and skills of trainees in general practice

Version: 0 Date: 08 Aug 2019

Reviewer: William Henry Smithson

Reviewer's report:

This is a useful study but difficult to assess the comparisons due to low participation and spread over the 5 commonest infiltration areas.

More detail is required about learner contact time over the 3 months and possible reasons for 8% participation

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
