Reviewer's report

**Title:** Different therapeutic approaches on quality of life in patients with inflammatory bowel disease

**Version:** 1  **Date:** 6 September 2014

**Reviewer:** Zhixiang Zuo

**Reviewer's report:**

The authors re-validated the IBDQ in Mainland Chinese, which is necessary due to the differences in geographic regions and high speed of westernization in Mainland China. The manuscript is well-designed and well-written. The authors performed a solid statistical analysis to prove the validity and reliability of adapted IBDQ in Mainland Chinese. Moreover, the authors evaluated the IFX therapy in IBD patients. The result is well-displayed and the explanation is interesting and convincing.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**
